Introduction

In this homework, I will explore, analyze and model a data set containing approximately 8000 records representing a customer at an auto insurance company. Each record has two response variables. The first response variable, `TARGET_FLAG`, is a 1 or a 0. A "1" means that the person was in a car crash. A zero means that the person was not in a car crash. The second response variable is `TARGET_AMT`. This value is zero if the person did not crash their car. But if they did crash their car, this number will be a value greater than zero.

My objective is to build multiple linear regression and binary logistic regression models on the training data to predict the probability

that a person will crash their car and also the amount of money it will cost if the person does crash their car.

Read the data set

```
train_data <- read.csv("https://raw.githubusercontent.com/JennierJ/DATA621/master/Homework4/insurance_train.csv")
eval_data <- read.csv("https://raw.githubusercontent.com/JennierJ/DATA621/master/Homework4/insurance_evaluation.csv")
```

Data Exploration and Cleaning

```
head(train_data)
```
